About Tangerine®: Tangerine is open-source electronic data collection software designed for use on Android mobile devices. Its primary use is to enable recording of students' responses in oral early grade reading and mathematics skills assessments. Tangerine is also used to capture interview responses from students, teachers, and principals.

Note: This user's guide assumes some knowledge of EGRA/EGMA/SSME survey methodology and is not a methodological guide to conducting these types of oral assessments and surveys. For further information on administering the content of the assessments themselves, please refer to the toolkits at www.eddataglobal.org.
